

REACH AND ROHS statement

Quality and Regulations

The quality policy of BUVO Castings B.V. is inextricably linked to our way of working. The high quality of our products is guaranteed by our skilled employees in combination with innovative production processes and ERP solutions. In addition, the choice of materials is also important. Within this framework, a number of directives and regulations within the EU are important.

EU regulations for chemical elements REACH (EC) No. 1907/2006

REACH is the European chemical legislation on Registration, Evaluation and Authorization of Chemicals. BUVO Castings B.V. only processes raw materials and semi-finished products that our suppliers declare that - insofar as they can verify this - comply with the REACH guidelines.

Since BUVO Castings B.V. neither makes its own chemical materials or substances nor imports them into the EU, REACH classifies BUVO Castings B.V. as a so-called 'downstream user'. This means that the registration obligations from the REACH regulations are not directly applicable to BUVO Castings B.V. as a manufacturer of high pressure cast aluminum products.

Nevertheless, we have informed all our suppliers about REACH and asked them to comply with all their obligations, including the registration right, arising from the regulations.

EU regulations for restriction of hazardous substances RoHS 3 (EC) No. 2011/65 / EU and 2015/863 / EU

The RoHS (Restriction of use of certain Hazardous Substances) is a European directive that must limit the use of certain hazardous substances in electrical and electronic equipment. The substances within the directive may only occur in electrical and electronic equipment if they remain below a maximum concentration (weight percent) of the homogeneous material.

BUVO Castings B.V. only processes semi-finished products that our suppliers declare that they - as far as they can verify this - comply with the RoHS guidelines. For questions about the materials used by us, you can contact us at any time.

Conflict Minerals (3TG) (EC) No. 2017/821

The international directive on the restriction of the sale and use of ores from conflict and high-risk areas is being adopted by BUVO Castings B.V. actively monitored.

All aluminum base materials and the purchased components are, as far as BUVO Castings BV can reasonably know, not subject to this guideline.

The download of the Conflict Minerals Reporting Template (CMRT) can be found [here](#).
